

Guess the Instruction Set

- Introduced in 1978 by Intel
- It remains backwards compatible with 32-bit processors from the eighties
- It is the most commonly used architecture in desktop systems

Guess the Instruction Set

- From the British company, evolved from Acorn Computers (famous for the BBC Micro)
- This 64-bit architecture dominates in phones and embedded devices due to low power usage.

Guess the Instruction Set

This is a harder one:

- This is the first widely accepted open source architecture
- It is not yet common in consumer devices
- It is gaining traction in the embedded market
- It can be found in the security module of Google's Pixel smart phones
